NOTES

- *1) The calculations are based on a multi-level verified certificate published by EPD International.
- *2) The calculations are based on published standards of the chemical industry.
- *3) GWP – Global Warming Potential
- *4) Virgin material: Primary polymer material based on fossil raw materials without recycled content.

The CO₂ savings result from comparing the Global Warming Potential (GWP) of ENTRON[®]eco with virgin material for the same purchased quantity.
